

CHENGDU GREENLAND
Chengdu, China

Taking its cue from the formality of the ancient city of Chengdu, the project features a balanced plan. The complex is made up of three primary components organized along a central spine. The placement of the components maximizes the site. The iconic tower sits to the Northeast and anchors the complex. Twin 150-meter residential towers are arranged on the Southwest side of the site. The towers bracket a podium building providing retail and conference facilities in the center. The components work together while maintaining their own individual identities.

COMPONENTS

- Office
- Hotel
- Residential
- Retail

DATA

Site Area	264,039 sf (24,530 sm)
Gross Building Area	4,700,000 sf (440,000 sm)
