

**GREENLAND BINHU INTERNATIONAL CITY
Zhengzhou, China**

The design of this mixed-use complex is founded on the principles of simplicity of form, surface, and beauty controlled by program, rationality, flexibility, performance and efficiency. Seen as a focal point for the district, the simple massing geometry becomes the overriding image maker for the project. The twin towers are intended to create a strong visual identity. The circular form of the project is wrapped with an red inner and silver outer skin. Each color can be read with multiple meanings: red at the center symbolizing good fortune and joy, and silver as the brightness representative of the future.
